CelleClé's Phyto-Silt Extreme

Posted: July 6, 2016

The Phyto-Silt Extreme black mud resurfacing mask helps smooth, purify, detoxify and hydrate skin. While evening out discoloration for a blemish-free and glowing complexion, the mask also helps reduce the appearance of dehydrated lines, micro-furrows and wrinkles.

The mask is formulated with plant-derived hydrators to lock in moisture, which lasts over 72 hours after applying to the skin.

The mask contains rice-grain derived phytic acid, which instantly smoothes rough surfaces; mineral-rich silt—or mud—from pristine European lakes to support cell renewal for long-lasting softness and hydration; and activated charcoal to draw impurities and refine pores for a clear, glowing complexion.

Key ingredients include:

- Black silt
- Phytic acid
- Charcoal
- Pentavitin
- DexPanthenol
- Glycerin
- Safflower oil
- Bisabolol
